Dear [Name]:

Re: Proposed Palliser Grid AI Data Centre – Vulcan County

I am writing as an Alberta resident concerned about the proposed hyperscale Palliser Grid AI data centre beside Travers Reservoir in Vulcan County.

I support AI investment and responsible economic development in Alberta. **My concern is that this project is simply in the wrong location.**

The proposed development would introduce a massive industrial complex into an agricultural, residential and recreational landscape beside Travers Reservoir and close to environmentally sensitive areas, Little Bow Provincial Park, approximately **250 homes at Little Bow**, rural residences and the **Southern Alberta Bible Camp, one of Alberta's most respected and long-established children's camps.**

This is not an established heavy-industrial area. It is a valued natural and recreational landscape used for farming, irrigation, camping, fishing, wildlife habitat and family homes.

The project could ultimately require significant supporting infrastructure, including power generation, natural-gas facilities, substations and transmission, battery storage, industrial cooling, water pumping and pipelines, and other infrastructure. The cumulative impact of the **entire industrial development needs** to be considered when determining whether this location is appropriate.

My concern also extends beyond Little Bow. Alberta is actively encouraging hyperscale AI development. **What precedent do we establish if projects of this magnitude can be located beside reservoirs, parks, environmentally sensitive lands and established rural communities?**

If this location is considered appropriate, where does Alberta's next hyperscale data centre go?

**Beside another lake? Another provincial park? Another farming community?
Another rural neighbourhood?**

AI data centres can be located in many places. **Travers Reservoir, our natural landscapes and the communities that have existed around them for decades cannot simply be relocated.**

I am asking you, as an elected Government official, to raise this issue with the appropriate provincial decision-makers and to support clearer provincial siting expectations for hyperscale AI data centres and their associated power infrastructure, particularly around residences, communities, reservoirs, parks and environmentally sensitive areas.

Alberta does not have to choose between economic development and protecting the communities and landscapes that make this province special.

We can support AI development while insisting on the right development in the right location. Please recognize that this location in the County of Vulcan is NOT RIGHT.

Thank you for considering my concerns. I would appreciate hearing your views on how Alberta should ensure developments of this magnitude are appropriately located.

Sincerely,
